PLANETPRESS for the Unix and Linux world with BRIGHTLINQ

Experience flexible variable data printing!

Print forms and transactional documents from UNIX/LINUX hosts the simple way with BrightLinQ.

Connecting Codehost's BrightQ Pro driver to PlanetPress printer resident forms.

With this unique product integration, implement forms and variable data printing in UNIX/LINUX environments with ease. Sophisticated forms can now be printed with a simple drop down menu system. Utilize high quality PostScript printers for graphically intense, documents such as invoices and statements.

What?

- Distributed and production printing of transaction based documents and reports with no PC based server.

Where?

- Government
- Education
- Finances
- IT Services
- Engineering

Benefits

Enabling UNIX/LINUX variable data printing brings numerous advantages:

- Save time and money by simplifying print setup and control.
- Gain full access to finishing features.
- Easily learn to create variable data documents.
- Gain flexibility & and benefit from compatibility in the UNIX/LINUX world.
- Replace expensive to run impact printers.

Variable data printing with BrightLinQ

5. From BrightQ Pro, select File > Print, to print the forms on any PostScript printer that is licensed with PlanetPress.

1. Print file is captured from UNIX/LINUX host for form design purposes.

2. Utilizing sample data, form is designed in PlanetPress design tool.

3. Select "Send to BrightQ" where the self-contained PostScript file generated with PlanetPress will reside.

For distributed printing applications, the form can also be sent to the printer's hard drive.

4. The form will now reside within BrightQ on the LINUX host which will be selectable directly from the BrightQ driver.

The PlanetPress Design tool is only needed to set up the print job for the first time.
